Program Trading

This course is an intense 1 week instruction that will teach you the basics of how to create your own program to trade the markets. It is geared towards the person that already has some trading experience and wants to implement their trading into an automated program. This is NOT a programming class; you will not be using programming language. We will only formulate the strategies and create the algorithm. The class, instructed live by a 25 year trading veteran, meets for a total of 7.5 hours.

Day 1

Mapping the Logic

Before anything can happen we have to design or map our trading process. Day one will be structured for every student to assist in the design of their own algorithm. The instructor will introduce one of his programs as an example that will be used throughout the week.

Day 2

Trading Strategies

Day two will focus on what type of strategies can easily be incorporated into a trading program. Also, discussions will lead to implementation of the strategies within a program; the execution logic of a trade.

Day 3

Complicated Strategies

In day three's lesson we will learn the logical steps necessary to incorporate some of the more complex trading strategies. We will start to consider the logic necessary for factors that are not part of the actual trade execution but other triggers that can change the execution process.

Day 4

Bring It All Together

Here in day four we actually start to bring all our logic together into one big algorithm. This sets the basis for the actual programming to begin.

Day 5

Hiring a Programmer

Day five will be dedicated to finding, hiring and communicating with a programmer. We will look at the necessary qualifications for a programmer and at various websites where programmers post their abilities.

Upon completion of the course the student will be able to set their trading style into an usable program. Questions during class are encouraged and after class the instructor is available for additional help. A lot of information is taught in one week and no one is expected to understand everything in the week; therefore the instructor is available for questions any time after the class has been completed.

Required Class Materials:

- **Text:** **There is no scheduled text for this class - the instructor will provide all learning materials.**
- Computer with a fairly good graphics card (if you can see videos smoothly then it is good enough)
- A decent size monitor - at least 20 inches (50 cm) wide
- A fairly fast internet connection (1.5 megs or better, slower will still work but there may be a delay; 10 megs will work best)
- 1 set of headphones with a microphone (preferably something that you can easily mute and un-mute as well as adjust volume of both the microphone and the ear piece).
- Paper Notepad – for taking notes

Class Times and Dates

For the next available class dates and times please see Trading Street's event calendar ([High Def](#)), ([Low Def](#)).

Registration and Payment

Cost is \$197.00 for the 1 week course
