

# TRADING STREET

Investing Course Series

A large, snow-capped mountain peak, likely Mount Fuji, set against a gradient background of pink and purple. The mountain is the central focus of the lower half of the cover.

# Long-term Investing for High Returns

## Long-term Investing for High Returns

This is an intense one week instruction designed to teach the student about various ways to invest utilizing best risk/reward ratios with the ultimate goal of high long-term returns (18 to 24 months). The course provides detailed instruction of research, entry/exit strategies and necessary money management skills. It is geared towards the person that already has good knowledge of stock investing with some knowledge of options trading. The class, instructed live by veteran trader Tim LuCarelli, meets for a total of 7.0 hours plus an additional 1.0 hour one-on-one for a total 8.0 hours.

### Day 1

#### Economic

The day is spent discussing ways to look at economics and how various reports influence the stock market as a whole as well as individual stocks. While earnings drive stock valuation, economics drive earnings thus making this discussion vitally important to laying a good foundation of research for any individual stock investment.

### Day 2

#### Industry Sectors

For an hour and a half we discuss analytical ways to assess various industry sectors. We take what we learned in our previous day's economic discussions to weed through potential industries where investments should prove to be high yielding either from a long or short position.

### Day 3

#### Individual Stocks

Here is the day that we start to really narrow the focus to a single investment. Once we have identified the industry then we need to find good solid companies within that industry that have great upward potential. We will discuss what to look for in the fundamentals of a company, the technical aspects of its chart patterns and ultimately how we will make a decision on which stock or stocks to invest our hard earned money.

### Day 4

#### Risk & Money Management

While we may have picked the best stocks to invest in that will provide incredible returns, if we do not exercise good money management skills we could turn a great investment into a bad one. Today's focus will be on the risk of the investment as well as the potential profit. Analysing key risk factors and exercising proper money management skills is vital to success.

### Day 5

#### Advanced Strategies

The final day is spent looking at advanced strategies that can further enhance returns. These strategies look to take advantage of extreme situations within the stock and options markets.

### **Class Prerequisites:**

Each student should have a good understanding of economics and technical analysis with a basic understanding of options. If you feel you are short knowledge in any of these fields please contact the instructor for guidance.

### **Required Class Materials:**

- Computer with fairly good graphics
- A decent size monitor - preferably at least 20 inches (50 cm) wide and at least 1080p resolution
- A fairly fast internet connection (5 megs or better, slower will still work but there may be a delay; 50 plus megs will work best)
- 1 set of headphones with a microphone (preferably something that you can easily mute and un-mute as well as adjust volume of both the microphone and the ear piece).
- Paper Notepad – for taking notes

### **Class Times and Dates**
